Introduction

This document sets forth the methodology for the IQ Short Duration Enhanced Core Bond U.S. Index (“Short Duration Enhanced”, the “Index”). Capitalized terms are defined herein.

Index Objective

The IQ Short-Duration Enhanced Core Bond U.S. Index seeks to outperform the short-duration, U.S. dollar-denominated, taxable, fixed-income universe by using a momentum investing strategy, which seeks to capitalize on the persistence of ongoing trends in the market.

Momentum is measured by comparing a short-horizon (45-day) moving average of returns to a longer-horizon (90-day) moving average of returns.

The Index uses a rules-based process to select and weight individual components of the Index (“Index Components”).

Eligibility Requirements

Index Universe

All of the Index Components are exchange traded funds (ETFs) registered under the Investment Company Act of 1940 or other exchange-traded vehicles issuing equity securities (ETVs) organized in the U.S.

All of the ETF and ETV Index Components are listed on one of the major U.S. exchanges (NYSE, NYSE Arca, and NASDAQ).

For Short Duration Enhanced, all Index Components will correspond generally to a sector of the US dollar-denominated taxable fixed income universe, including, but not limited to:

- U.S. Short Term Treasuries
- Short Term Investment Grade Corporate Bonds
- Short Term U.S. High Yield Debt
- Investment Grade Floating Rate Securities

Selection Criteria

IndexIQ identifies all existing ETFs and ETVs that meet the Index Eligibility Requirements set forth above.

Selected ETFs and ETVs must have a minimum total asset value of \$50M as of the Reconstitution Date.

To the extent that more than one ETF or ETV provides substantially the same sector exposure, IndexIQ selects the ETF or ETV with the highest AUM level, longest historical performance record or other objective factor to be representative of such sector exposure. The ETF or ETV selected becomes the primary component (“Primary Component”).

Index Construction

Weighting

Total return momentum is used to determine the raw score of each Primary Component.

Momentum is measured by comparing a short-horizon (45 day) moving average of returns to a longer-horizon (90 day) moving average of returns for an index that is representative of the Primary Component.

Primary Component raw active weights relative to the US dollar-denominated taxable fixed income universe are assigned in a linearly declining way such that Primary Components showing stronger (weaker) momentum receive higher (lower) active weights.

- The sum of the positive active weights cannot exceed 100%
- The sum of the negative active weights cannot exceed -100%
- The sum of the positive active weights is equal to the sum of the negative raw active weights.

Concentration Limits

All Primary Component final weights must be positive, indicating a long exposure.

- Primary Components are each subject to a 100% maximum final weight in the Index
- Additionally, Short Term U.S. High Yield Debt and Investment Grade Floating Rate Securities are each subject to 25% maximum final weight in the Index.

For the Index, the raw weights of the Primary Component will be adjusted based on the constraints above and the sum of all final weights is 100%.

The final Index is comprised of the Primary Components as well as any other ETFs or ETVs that are substantially similar to the sectors of such Primary Components. The Index Components are weighted within a given fixed income sector in the final Index proportionately based on their total asset size such that Index Components with higher asset size receive proportionately higher allocations within a given fixed income sector than Index Components with lower asset size.

Index Shares

Shares held within the index are derived from a notional value, the weight as determined above, and component prices as of the Reconstitution or Rebalance.

Index Maintenance

Reconstitution

IndexIQ conducts an annual review of all Index Components once a year during the second calendar quarter, with any change in Components (additions or deletions) (the “Annual Reconstitution”) implemented no later than the third calendar quarter.

Rebalance

The Component weights for the Indexes are rebalanced on a monthly basis (the “Monthly Rebalance”) pursuant to the process described in “Component Weightings” above for each Index.

The monthly rebalance for the Indexes is effective at the open of the fourth business day of each month.

Corporate Events and Index Policy

Refer to the IndexIQ Events Guide.

Index Calculation

Index Level

The following general formula is used to calculate the Index Level:

$$\frac{\sum_{i=1}^n (P_i \times \text{Shares}_i)}{D}$$

P_i = Price of security i

Shares_i = Shares of security i

D = Divisor

Return Series

The Index return series is based on the treatment of cash dividends, stock dividends, and spin-offs (collectively determined as a “Distribution”).

- The Price Return (PR) index is calculated without adjustments for distributions.
- The Total Return (TR) index reinvests distributions as of the ex-date.

In the event there are no distributions the daily performance of both indexes will be identical.

Currency

The Indexes are calculated in U.S. Dollars.

Base Dates and History Availability

Index	Base Date	Base Value
IQ Short Duration Enhanced Core	June 30, 2018	1000

Ticker

Index levels are available through major quote vendors, numerous investment-oriented websites, and various print and electronic media. IndexIQ LLC’s website also provides an archive of recent index announcements.

Index	Return Type	Bloomberg

APPENDIX 2: Disclaimers

Disclaimers

This document and the information included herein is proprietary to IndexIQ LLC and is protected by copyright and other intellectual property laws. The unauthorized copying, redistribution, sale, retransmission or other transfer to a third party of this data, without the prior written consent of IndexIQ LLC, is strictly prohibited.

Any use or exploitation of this document or the information included herein, for the purpose of creating any financial product or service which seeks to match the performance of the Indexes, or which otherwise is based on the Indexes, is not permitted unless a written license from IndexIQ LLC has been obtained.

It is not possible to invest directly in an index. Exposure to an asset class represented by an index is available through investable instruments based on that index. IndexIQ LLC does not sponsor, endorse, sell, promote or manage any investment fund or other investment vehicle that is offered by third parties and that seeks to provide an investment return based on the performance of any index. IndexIQ LLC makes no assurance that investment products based on the index will accurately track index performance or provide positive investment returns. IndexIQ LLC makes no representation regarding the advisability of investing in any such investment fund or other investment vehicle. A decision to invest in any such investment fund or other investment vehicle should not be made in reliance on any of the statements set forth in this document. Prospective investors are advised to make an investment in any such fund or other vehicle only after carefully considering the risks associated with investing in such funds, as detailed in an offering memorandum or similar document that is prepared by or on behalf of the issuer of the investment fund or other investment product or vehicle. IndexIQ LLC is not a tax advisor. A tax advisor should be consulted to evaluate the impact of any tax-exempt securities on portfolios and the tax consequences of making any particular investment decision. Inclusion of a security within an index is not a recommendation by IndexIQ LLC to buy, sell, or hold such security, nor is it considered to be investment advice. Closing prices for IndexIQ LLC's indices are calculated by the Calculation Agent based on the closing price of the individual constituents of the index as set by their primary exchange. Closing prices are received by the Calculation Agent from one of its third party vendors and verified by comparing them with prices from an alternative vendor. The vendors receive the closing price from the primary exchanges. Real-time intraday prices are calculated similarly without a second verification.
